Aug 2023

■ **Al-Mawkib Al-Thaqafi App**

Role-based management application developed for Al-Abbas Holy Shrine, allowing Mawkib managers to control axes and stations, station managers to register participants with their names and countries, and generating detailed statistics for the entire Mawkib, each axis, and each station at the end of the Arbaeen pilgrimage.

for more

Jan 2024

■ **Eye Clinic Management System**

Clinic management system that allows reception staff to register patients, doctors to approve and manage patient visits, display previous visit history for returning patients, and create or update patient medical records after consultation.

for more

Jun 2024

■ **Al-Sadiq Management System**

Integrated business management system developed for Al-Sadiq Ceramic, covering employee management, warehouse operations, suppliers, delegates, agents, and order processing. The system implements a detailed role-based permission structure (Manager, Employee, Accountant, Warehouse Keeper, Supplier, Delegate, Agent), where managers oversee all operations, employees create showroom orders, warehouse keepers prepare and deliver orders, accountants manage financial settlements, suppliers track inventory, debts, and profits, delegates handle virtual sales and commissions, and agents sell from their own showrooms supplied by Al-Sadiq warehouse. The platform provides comprehensive sales, financial, and performance analytics across all entities, enabling full managerial oversight and decision-making.

May 2025

■ **Kentucky House Restaurant System**

Integrated restaurant ordering system featuring an in-store electronic menu website and a mobile application that allows users to register via phone number and place orders directly from the restaurant. Orders are confirmed by the cashier and delivered by assigned drivers using the customer's real-time location. The system supports multi-role access (Manager, Supervisor, Cashier, User), enabling full control over application settings, order management, delivery operations, customer reviews, and ratings, with comprehensive visibility for management.

for more

Dec 2025

■ **Bella Dama Offers Management System**

Promotional booking system developed for Bella Dama clinics, supporting multiple roles (Manager, Supervisor, Clinic Manager, User). The system allows management to configure promotional offers such as booking two Revital sessions with a third free, three filler sessions with a fourth free, or a free Revital session. Users can only request sessions when physically present inside the clinic, enforced through location-based verification. The platform enables managers to add supervisors and clinics, manage offers, track bookings, and monitor detailed usage and performance data across all clinics.

for more

■ **Al-Qari Quran Competition Management System**

A comprehensive multi-tenant system developed to manage Quran competitions with full data isolation between competitions. The platform supports multiple user roles including Super Admin, Competition Admin, Judges, and specialized staff members. It manages all aspects of competitions such as participants, companions, judges, employees, hotels, room assignments, visas, tickets, transportation, meals, and studio appointments. The system provides flexible multi-stage competition workflows with configurable judging criteria and score tracking per stage. Judges can record scores and review previous evaluations, while staff handle operational tasks through role-specific interfaces. A secure passwordless authentication system based on Magic Links is implemented with rate limiting and audit logging. The platform includes detailed analytics and reporting for participants, scores, accommodations, countries, and operational performance. Administrators have full control over competition lifecycle management including activation, pausing, archiving, and permanent deletion with safe data handling. The system features a fully Arabic RTL interface designed for scalability, security, and institutional use.

PROJECTS IN PROGRESS

■ **Medical Affairs Management System**

Comprehensive healthcare management system under development, covering medical consultations, treatments, pharmacy management, and integrated medical services to streamline clinical workflows and patient data management.

■ **Al-Muzammil Islamic App**

Islamic mobile application under development, focused on providing structured religious content and tools through a secure, user-friendly, and spiritually oriented digital experience.
